Overview

TyreLink is a Ghana-focused digital platform that helps drivers find suitable tyres for their vehicles. Users can enter their tyre size, browse available options, compare tyre categories and prices, and identify tyres that match their requirements.

The platform is designed to make tyre purchasing simpler, clearer and more reliable for Ghanaian drivers, tyre retailers and fitting partners.

Goals

- Help users find the correct tyres for their vehicle.
- Reduce confusion around tyre sizes and specifications.
- Display relevant tyres based on the user's selected size.
- Allow users to browse tyres by brand and price category.
- Create a foundation for connecting customers with tyre sellers and fitting services.
- Build a mobile-first experience suitable for the Ghanaian market.

Specifications

TyreLink is a responsive web application designed primarily for mobile users. The platform includes:

- A guided tyre-size selection process.
- Tyre catalogue browsing.
- Filtering by brand and price tier.
- Budget, mid-range and premium tyre categories.
- Dynamic results based on the selected tyre size.

- Clear messaging when no suitable tyres are available.
- Product and price information supplied through a live database.
- Supabase for data management.
- Vercel for hosting and deployment.
- A clean, accessible interface designed for drivers and tyre customers in Ghana.

Customer Journey

The core customer journey is:

1. The user visits TyreLink.
2. The user confirms their vehicle or enters their tyre size.
3. TyreLink searches for matching tyres.
4. The user reviews available brands, categories and prices.
5. The user selects a suitable tyre, and how many they will need.
6. The user then chooses a suitable fitting station based on location (proximity to their current location in future versions) - Selects a date/time slot.
7. The user views an itemised bill and is offered upsells for alignment, based on fitting station
8. User pays deposit and is invited to visit the fitting station to complete the process.
9. User attends fitting station
10. User has works carried out including any extras
11. Upon completion user pays remaining balance
12. User is invited to leave feedback in app

Core Fitting Station Journey

1. Fitting station receives the booking
2. Station prepares for the arrival of the tyres

- 
3. Tyres arrive and the fitting station can message the customer directly
 4. Customer receives booking confirmation
 5. Customer arrives at the fitting station
 6. Vehicle and tyre details are verified
 7. Additional services are confirmed
 8. Tyres are fitted
 9. Quality and safety checks are completed
 10. Customer pays the remaining balance
 11. Job is marked as complete
 12. Customer receives completion confirmation
 13. Customer leaves feedback

Core Admin Journey

1. Admin logs into the TyreLink dashboard
2. Admin reviews new customer bookings
3. Admin verifies the booking
4. Admin can update tyre availability
5. Admin arranges delivery of the tyres
6. Admin can track tyre delivery
7. Admin confirms tyre arrival
9. Admin monitors the appointment
10. Admin does not manage additional services
11. Admin does not monitor the final payment
12. Fitting station completes the job
13. Admin reviews customer feedback
14. Admin manages exceptions
15. Admin keeps track of fitting station feedback

Payment Methods

Payment for deposits should be momo, credit/debit card

Payment at fitting station should be clear to customer at selection point

Milestones

Initial Platform

Create the first mobile-first TyreLink experience with a clear landing page and simple navigation.

Tyre Size Selection

Develop the tyre-size confirmation journey so users can identify the correct size for their vehicle.

Catalogue and Filtering

Connect the catalogue to live tyre data and introduce filters for brand, price tier and availability.

Ghana Market Readiness

Refine the platform for Ghanaian users, including local supplier relationships, pricing in Ghana cedis and practical purchasing or fitting options, deposit payment by momo.

Partner Integration

Connect TyreLink with tyre retailers, distributors, mobile-money payment providers and fitting centres.

Growth and Expansion

Expand the platform into a broader tyre marketplace with customer accounts, supplier dashboards, order tracking, delivery options and vehicle-service partnerships.

Points to note

Version 1, will not be mobile native, but will be a PWA, mobile first web app.

Deposits SHOULD cover the entire cost of the tyres, so that they are paid for prior to shipping.

Provisions need to be made to confirm the delivery and quality of tyres

New fitting station onboarding needs to be discussed with Ernest

Tyre suppliers needs to be discussed with Ernest

Version 2.0.0

Features to be added

- Customers can sort fitting stations by closest to their current location
- In-app messaging between customers/admin/fitting stations
- Native iOS and Android apps - available on Google Play and App Store
-
